

# Project Release Notes

Release 2.11 (November 2020)

# Enhancements

## Drag and drop attachments

Your app users can now select and attach one or more files to their record by simply dragging and dropping the selected set of files onto the Insert attachment placeholder in the Attachments section of all editable actions.

This feature is supported on the Appify Web client app in this release and will be available on iOS and Android apps in a future release.

# Fixed issues

The following customer issues are fixed in this release:

Issue ID	Product area	Issue description
CD-788	Web Client	The configured default value for Boolean fields was not automatically getting set in the apps. After the fix, Boolean fields are either set to the configured default value to 'No' if the user does not specify any value.
CD-851	Studio, Web Client	Filter criteria based on <code>#{LOGGEDINUSER}</code> literal in the right-hand side of the expression was not working for lists. It did not list any records in the app. This issue only occurred where the data source was Salesforce.
CD-859 CD-863	Web Client	Child records and / or attachment deleted in the edit actions still appeared in the view action after saving the changes. This issue occurred only in Flex objects.
CD-860	Web Client	Pre-filters on lookup fields were not working if it was based on another lookup value in the same action. Due to this issue, the lookup values were not getting populated.
CD-870	Android	Filter criteria based on the literal <code>#{LOGGEDINUSER}</code> did not return any records if the sign-in mechanism for your Appify account was SSO authentication. This issue occurred only in where the data source was Salesforce.

CD-872	Studio	Signing in to Studio using the Enter key on the keyboard was not working. Clicking the Submit button on the Sign-in screen was the only way to sign in.
CD-873	Web Client	Resetting the user password from the browser using the Enter key on the keyboard was not supported. You could only do it by clicking the Reset button on the screen.
CD-880	Studio	The field configuration popup window did not appear in the Edit action designer when you clicked on any reference field in the Lines section. The screen did not finish loading.
CD-897	Web Client	In Edit/Create/Fork actions, if any LOV field was configured as required, it was not marked with a red asterisk in the app to indicate that it was mandatory.
