

# Project Release Notes

Release 3.7 (July 2021)

# Release summary

Release 3.7 is focused on bug fixes and optimization. Click [here](#) for information on issues fixed in this release.

# Fixed issues

The following customer issues are fixed in this release:

Issue ID	Product area	Issue description
CD-1758	iOS, iPad, iPhone	If no default value was set in the Studio for Boolean fields, the value was automatically getting set to 'No' instead of leaving it unset.
CD-1789	iPad	Under certain conditions, some form fields disappeared from the screen when users entered a value in one of the adjacent fields.
CD-1800	Web Client	Updating picklist values in List actions resulted in an error.
CD-1825	Web Client	In the child section of Edit actions, sorting and filtering records on reference fields was not working. Clicking the Filter icon emptied the section and clicking the Sort icon on a reference field sorted the records on some other field in the child section.
CD-1857 CD-1888	Studio	Adding external APIs to an Event drive action resulted in an error when saving the configuration.
CD-1871	Studio	In the Data sharing screen, the filter criteria panel did not open on clicking the Criteria info link.
